

AuthCode Manager 4

AuthCode Manager provides legal firms with an automated tool for PBX authcode administration. This innovative application integrates with the firm's existing accounting package and automatically adds new client-matter codes into the PBX while removing codes which are no longer required.

Authorization code updates can be done once a day or every hour if desired. A day-of-week schedule is used to determine the days when updates should be performed.

PBX technician's can also use the program to add authcodes on an ad-hoc basis, if needed.

A convenient 'Terminal' window is provided which can be used to administer PBX functions or for maintenance purposes.

In addition, AuthCode Manager can be used to backup the firm's existing authorization codes to a database for disaster recovery. In the event that the PBX were to ever experience a catastrophic failure, AuthCode Manager could be used to rebuild the PBX authcode database automatically.

AuthCode Manager integrates with the Nortel Meridian, Succession, or CS 1000 PBX via a serial port. All PBX interaction is via this connection.

AuthCode Manager integrates with the firm's existing accounting system via several database file formats ranging from simple text file outputs to ODBC (Open Data Base Connectivity) connections.

Several AuthCode Manager sites can be synchronized to a single main database. This ensures, for example that the firm's London, Dallas, and Los Angeles offices are all operating on the same set of authcodes as the firm's New York location.

Features and Benefits:

1. Faster updates
2. More accurate updates
3. Highly reliable operation
4. Authcode database on PC
5. Disaster recovery
6. Multi-site synchronization
7. Automatic scheduling
8. Fast Return-On-Investment
9. Reduced training time
- 10 Terminal port access

AuthCode Manager 4 is available for Nortel Meridian 1, Succession and CS 1000.
